# SCENT MASTER™

the SCENTsible solution

*"The ScentMaster is that missing piece of the puzzle that so many guys need and have been looking for. It really is a difference maker for me."*

*~Bryan from Kansas*

**ScentMaster is going to change the way hunters attack foreign odors and approach scent control. The 30-gallon capacity box has a high powered motor which moves 110 cubic feet per minute of 130 degree air, literally pulling unwanted odors from the fibers of your clothing and trapping them in the thick, activated charcoal filters, thereby rendering your clothing scent-free. At the same time, moisture is removed from your clothing by the heated, continuously circulating air.**

**Then use the scent basket with a scent wick or a scent bag with your own secret mixture, and the ScentMaster will drive the cover scent deep into every fiber of your clothing, boots and accessories, allowing you to disappear in the woods, prairie, or wherever you hunt.**

*"Jim McHale (on the left) harvested this beauty at 8 yards with his bow. We both give credit to your ScentMaster. We both own the original from 1997 and use it between every hunt. I have had deer directly down wind from me on many occasions and they have not scented me. Of course keeping your body clean and scent free helps also, but neither of us would think of a hunt without first running our clothes through the ScentMaster. Thanks for a great product from two 72 year-old Pennsylvania Bowhunters."*

*~Jim Ennis*

# ScentMaster is the SCENTsible Solution

- **FAST**
- **SIMPLE**
- **EFFECTIVE**
- **PROVEN**

*"Thank you for enjoying and sharing my feelings about serious deer hunting. As you can tell from the pictures, when things work you stick with them, and the ScentMaster works. I know ScentMaster has updated models available but by the time I wear my current one out, I'll most likely be too old to put in all the time and effort to REALLY HUNT. So I guess you could say my ScentMaster will last me a lifetime of deer hunting! Thanks again for the great service."*

*~Bob*

*Ted in Ohio with his proof that ScentMaster worked for him!*

**No more hanging your clothes outside to be scent-free or using your family's dryer to dry your pant legs after a morning hunt!**

## **ScentMaster Science**

Charcoal is carbon. Activated charcoal or carbon has been treated with oxygen to open the millions of tiny pores between the carbon atoms. Synthetic media substrates, non-woven polyester, is then impregnated with finely ground carbon coatings, and heat set to retain those coatings in the media. The large surface area of activated charcoal works by molecular action to pull and hold noxious odors in the millions of tiny pores in the media coating - a process known as adsorption. Adsorption with activated charcoal permanently removes the odor causing molecules from the air. The amount of odor causing molecules trapped in the activated charcoal is dependent on the amount of activated carbon in the medium and by how thick the activated carbon/charcoal layer is. ***This is why we only use the highest quality carbon coatings in our filters which are ground to an extremely fine particle size with a coated thickness of 1/2 inch to increase the surface area available for adsorption.***

### **Q: Adsorb or absorb, what is the difference?**

**A:** Adsorption occurs when activated carbon grabs and holds other compounds, including gases, scents and odors. Just as a sponge soaks up water, activated carbon media adsorbs odors and fumes. Absorption is the process of actually taking something in, such as absorbing heat or sunlight.

### **Q: Should I still use carbon clothing or scent-elimination sprays if I have ScentMaster?**

**A:** Let me be completely honest regarding this – we don't believe any one product is 100% perfect or fool-proof. We believe the ScentMaster is the missing link in the overall process of scent control and moves an individual's chances significantly closer to being 100% scent-free than without it. Having said that, I still shower with scent-free soap every time I hunt, some of my clothing is carbon lined, and I always spray my boots with scent-free spray before each hunt.

### **Q: How long should I run the ScentMaster to de-scent my clothing?**

**A:** That depends on the type of weather you are hunting in (hot and humid, or cooler) and your body type (someone who perspires easily or heavily). Typically, 15-30 minutes is ample for the normal person in normal weather conditions.

### **Q: Why should I own a ScentMaster – I have carbon lined clothing, use sprays, and shower using scent-free soaps?**

**A:** We all do and have invested a lot of time and money in our hunting gear and clothing, and it isn't cheap. Yet having watched many hunters from all over the country prepare to go to the field, I have noticed that very few of them do a good job of keeping their clothing scent-free, particularly the exterior surfaces. In addition, very few hunters use scent elimination sprays correctly – a couple of squirts here and there and they think that is good enough. Other hunters claim they only hunt in locations where the wind is perfect – we all try to, right? But unfortunately, the wind swirls and can change directions suddenly, making it impossible to move locations at 4:30 in the afternoon, when it gets dark at 5:15 and you already have deer moving by your stand. The ScentMaster is designed to help you do everything you can to control your scent in a way which is simple to use, and makes sense in the everyday, real world.

**The ScentMaster is easy to use, effective, and convenient.  
Use it correctly and regularly, and you will see a marked difference  
in the number of close encounters you have each year!**
